

RESEARCH INTERESTS

I am broadly interested in data management systems that extend data analysis capabilities to domain-experts and normal users. Relevant fields include core database optimization, data provenance, and interface design.

EDUCATION

- Winter 2014 **Massachusetts Institute of Technology**, Cambridge, MA
Ph.D., Electrical Engineering and Computer Science
Advisor: Samuel Madden
Dissertation: Explaining Data in Visual Analytic Systems
- May 2010 **Massachusetts Institute of Technology**, Cambridge, MA
M.S., Electrical Engineering and Computer Science
Advisor: Samuel Madden
Dissertation: Shinobi: Insert-aware Partitioning and Indexing Techniques For Skewed Database Workloads
- Spring 2007 **UC Berkeley**, Berkeley, CA
B.S., Electrical Engineering and Computer Science

PROFESSIONAL EXPERIENCE

- 2015– **Columbia University**, NY, NY
Assistant Professor – Computer Science
- 2015 **UC Berkeley**, Berkeley, CA
Visiting Scholar – AMPLab
- 2008–2014 **Massachusetts Institute of Technology**, Cambridge, MA
Ph.D. Student – CSAIL

CURRENT PROJECTS

Data Visualization Management Systems

A Data Visualization Management System (DVMS) integrates visualizations and databases, by compiling a declarative visualization language into an end-to-end relational operator pipeline that renders the visualization and is amenable to database-style optimizations. Thus the DVMS can be both expressive via the visualization language, and performant by leveraging traditional and visualization-specific optimizations to scale interactive visualizations to massive datasets.

<https://cudbg.github.io/lab/dvms>

Perceptual Functions for Data Visualization

Increasing data sizes has made it more difficult to build highly responsive interactive visualization tools due to the enormous quantity of input data and results that must be computed. Sampling-based approximation query processing is a promising research direction however over and under-sampling can easily lead to wasted resources or incorrect visualizations. We are modeling human perceptual limitations and using those models to automatically help visualization systems generate approximate but perceptually accurate visualizations.

<http://perceptvis.github.io/>

Data and Query Explanation

Data analysis is rarely a one-off linear process it requires performing analyses, and carefully studying and understanding the results. The latter process is particularly challenging because analysts lack tools to help understand why analysis results look strange, contain outliers, or have patterns that differ from their expectations. Our lab develops tools and algorithms to provide user-understandable explanations.

<https://cudbg.github.io/lab/dbexplain>

Explaining Machine Learning Models

Machine learning models are increasingly used in critical real-world applications such as self-driving cars, loan processing, fake news detection, and more. However these models are highly complex and have a reputation for being black boxes when they make a prediction, it is unclear how the decision was made. Similarly, it is not clear what the model is using to make a prediction and how changes in the data would affect its predictions.

To this end, our lab develops algorithms to interpret complex machine learning models (e.g., deep neural networks, random forests, etc) by identifying training data that affected a prediction, describing what parts of the model are learning, and how user generated inputs can be improved to better help the model.

<https://cudbg.github.io/lab/mlexplain>

Data Cleaning for Machine Learning

Data cleaning is fundamentally challenging because there does not exist a pre-existing notion of correctness for the cleaned data. In addition, it is unclear whether data cleaning improves the downstream applications. For example, it is possible that data cleaning can make machine learning models worse than no cleaning at all. We are exploring semi and fully-automated data cleaning techniques for machine learning applications

PAST PROJECTS AND JOBS

MIT Big Data Challenge

I developed and ran MIT's largest Big Data prediction and visualization challenge.
<http://bigdatachallenge.csail.mit.edu>

"Why" Analysis of SQL Aggregate Queries

I designed and implemented an analysis framework to explain outliers in the results of aggregation queries by constructing predicates on the input data. I formalized the concept of predicate influence and identified several operator properties to enable more efficient search algorithms on common statistical aggregates.

Efficient, Low Overhead Provenance

I designed, prototyped, and evaluated a low overhead provenance system for large-scale scientific workflow applications that process gigabytes of data per second.

Query Processing with Humans

This project pioneered the use of human computation platforms such as Mechanical Turk within a database query execution engine.

Index and Partitioning Techniques

I investigated the application of indexing and partitioning techniques for time-varying and skewed query workloads. Shinobi incrementally re-partitions and indexes database tables based on recent query access patterns. Our subsequent No Bits Left Behind paper proposed the use of unused space in B-tree index pages as a cache for heavily accessed tuples. This could improve the performance of skewed query workloads such as Wikipedia's access patterns by up to three orders of magnitude.

Trajectory Optimized Storage

I implemented the core storage system for TrajStore, a high performance data management system for storing and querying vehicle trajectory data by location and time. The system incrementally optimizes the storage layout as the query workload changes over time.

2007-2008 **Google Inc., Mountain View, CA**

Intern – Data Management Research

I worked in Alon Halevy's data management group on the WebTables project to mine the Google web corpus for tabular data. I developed the table extraction pipeline and extracted more than 125 million tables. In addition, I built a table search engine that lets users query over the structured data and automatically visualize attributes in graphs or maps.

Summer 2006 **Yahoo!, Santa Clara, CA**

Engineering Intern

I explored efficient implementations of RDF stores for an internal project.

Summer 2005 **Microsoft Inc., Redmond, WA**

Engineering Intern

I worked on efficient deep cloning and other internal features in Exchange Server

Spring 2005 **IBM Extreme Blue., Almaden, CA**

Engineering Intern

I developed a new software patch service for DB2 for z/OS team that reduced patch application times from the order of months to minutes.

2004–2006 **UC Berkeley, Berkeley, CA**
Undergraduate Researcher – Computer Science Department

High Performance Stream Processing

I designed and implemented one of the first high performance complex event processing systems for detecting high level events (e.g., shoplifting occurred) from streams of raw sensor events (e.g., RFID tag XXX detected). Our results were published at SIGMOD, the premier database conference.

The HiFi Project

I implemented the RFID reader interface for extracting raw events from early RFID readers and the interactive dashboard for the VLDB demonstration. HiFi is a research project around cascading stream architectures for large-scale geo-distributed receptor-based networks.

AWARDS

- 2018 Amazon Faculty Award
- 2016 SIGMOD best demo award

GRANTS

- 2016 ACM SIGMOD Conference 2016: Student Activities and Travel Support
- IIS: Medium: Collaborative Research: Composing Interactive Data Visualizations
- Columbia Alliance: Perceptual Functions for Faster Interactive Visualizations
- REU: Development of Graphical Perception as a Service
- 2015 III: Small: Collaborative Research: Towards Interactive Data Visualization Management Systems

SERVICE

- 2018 ICDE PC
- SIGMOD PC
- HILDA Co-chair
- SIGMOD New Researcher Symposium Co-chair
- SIGMOD Publicity Co-chair
- 2017 ICDE Area Chair
- WWW PC
- SIGMOD Demo PC
- SIGMOD PC
- VLDB PC
- HILDA PC
- SSDBM PC
- HCOMP PC
- 2016 InfoVis Reviewer
- HILDA PC
- NEDBDay Co-Chair
- SIGMOD travel award committee
- 2015 SIGMOD travel award committee
- 2014 DATA4U PC

TEACHING EXPERIENCE

- Spring 2018 *Instructor, Database Topics in Research & Practice*
<http://columbiadb.github.io>
- Instructor, Computing Systems for Data Science*
<http://w4121.github.io>
- Spring 2017 *Instructor, Interactive Data Exploration Systems*
<http://columbiaviz.github.io>
- Instructor, Computing Systems for Data Science*
<http://w4121.github.io>
- Fall 2016 *Instructor, Introduction to Databases*
- Spring 2016 *Instructor, Big Data Systems*
- Fall 2015 *Instructor, Introduction to Databases*
- Fall 2013 *Instructor, From Ascii To Answers (MIT 6.885)*
 I co-developed and instructed MIT's first Big Data course focused on large scale data analysis tools and techniques. Topics ranged from data cleaning and integration, large-scale systems like Hadoop, to scalable visualization techniques. We developed eight labs to give students hands-on experience with the systems covered in class. The course is freely available online at <http://github.com/mitdbg/asciiclass>
- Spring 2012 *Instructor, Introduction to Data Analysis*
 I co-developed and taught an Introduction to Data Analysis course to approximately 20 students during MIT's Independent Activities Period in January. The course is freely available online at <http://dataiap.github.io>
- 2011 – 2012 *Head of Curriculum, MEET*
 MEET is a 3-year technology program and peace initiative that teaches Israeli and Palestinian high school students. I organized curriculum preparation for each year's incoming instructors. I also successfully migrated the organization from a Java-based curriculum to a Python-oriented one and developed the lesson plans for the transition.
- Fall 2010 *Teaching Assistant, Database Systems (MIT 6.830)*
 I assisted in writing and grading the assignments and projects.
- Summer 2010 *Instructor, MEET*
 I mentored a group of 30 Israeli and Palestinian high school students as part of the MIT MEET program, a peace initiative in the Middle East centered around teaching computer science.
- Spring 2010 *Instructor, Introduction to Java Course (MIT 6.S092)*
 Spring 2011 I instructed a class of 50 students in an introduction to the Java programming language. MIT does not have such an introductory course, so this course is taken by many MIT undergraduates to prepare them for 6.004, a core course that assumes proficiency in Java. The course is freely available online at <http://bit.ly/alvK9m>

Fall 2006 *Teaching Assistant, Database Systems (UCB CS186)*

I taught approximately 30 students in weekly discussion sections. I assisted in writing and grading the assignments and projects.

PERSONAL

I love drawing and designing T-shirts, stickers, and posters. I have created over 20 designs that have been printed and my shirts have been worn by thousands of people. The following link lists some of my designs.
